

UNIFORM COLOR COMPANY®

*The Perfect Match*

*Come Design With Us. . .*

Uniform Color Company can assist you with your color design needs. By visiting our color design center, large projects, requiring several color variations, can be completed in one day.

**Innovation and Experience At Your Service . . .**

UCC has been coloring plastic for more than 30 years using the newest special effects and innovative colorants and additives. You'll be inspired by our color swatches, plastic chip libraries, new special effects and part displays.

Extrusion blow molded bottles (mono or multi layer), injection molded plaques of varying thickness and curvatures and controlled thickness press-outs can be used to simulate a wide array of final application parts to assist in the color design process. Color measurement instruments and standard lighting ensure that the evaluation of the final results are true, accurate and documented.

*Get Your Color to Market Faster. . .*

**Formulations You Can Trust . . .**

When your color is developed by UCC, you can be confident that not only will the color be right, but all of the other performance, regulatory and cost requirements will be met. If necessary, formulas can be designed for global portability.
