

Need for Speed? Day of Design

Design Center Services

Uniform Color Company (UCC) has been coloring plastics for more than 35 years using the latest special effects, innovative colorants, and additives. By visiting our color design center, large projects requiring several color variations can be completed in just one day. You'll be inspired by our color chip libraries, new special effects, and part displays or we can assist you with concept development of your color.

The Day of Design Process:

- **Schedule** your day through your account manager. Lab time and resources are reserved for your visit.
- **Preparation** - Send us your concepts, targets and special resins.
- **Day of Design** - Bring your creatives and decision makers to participate in real-time color development, feedback, and approval. Molded plaques, curved chips, or controlled thickness press outs are used to simulate the final application part. Color measurement instruments and standard lighting ensure the evaluation is true, accurate, and documented.
- **Follow Up** - After your Day of Design, we follow up with any documentation, chips, or tool trial samples.

Formulations You Can Trust

When your color is developed by UCC, you can be confident that your color is precise and meets all performance, regulatory, and cost requirements. Formulas can be designed for global portability. And don't forget our color mastering services to support your brand communication. Our formulas can be delivered in solid or liquid masterbatch forms.

Contact your account manager to schedule your custom color design collaboration or email us at info@uniformcolor.com
